A Graph is a non-linear data structure consisting of nodes and edges. The nodes are sometimes also referred to as vertices and the edges are lines or arcs that connect any two nodes in the graph. More formally a Graph can be defined as, A Graph consists of a finite set of vertices(or nodes) and set of Edges which connect a pair of nodes.

For a Directed Graph, it consumes  $O(|V|^2)$  space which is often under-utilized in the implementation. For an Undirected Graph also, it consumes  $O(|V|^2)$  space which is also under-utilized as the generated matrix is symmetric about diagonal and values just repeat. For a Directed Graph it consumes  $O(|V| + |E|)$  space which is less, and is utilized optimally.
