Expectancy effects on subjective experience are driven by responses in these regions as well as regions less reliably activated by changes in noxious input, including the dorsolateral prefrontal cortex and the orbitofrontal cortex. Thus, multiple systems are likely to interact and mediate the pain-modulatory effects of expectancies.

How expectations shape pain - ScienceDirect

In this chapter we review behavioral and neuroscientific studies that investigate how expectations shape our affective experience. Drawing on existing studies in the domain of negative affective experiences such as pain and positive affective experiences such as taste pleasantness, we suggest a multidisciplinary model of how expectancies alter our subjective consumption experience
